```
mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39 polypeptides.
```

Example 9; Page 107-109; 118pp; English.

The present sequence is the coding region of soluble CD39(solCD39) expression plasmid. This was used for the transient expression of solCD39 protein in mammalian expression systems. SolCD39 is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis (DVT), thrombosis, thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, recoclusion, stenosis or restenosis of blood vessels or stroke

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present DNA sequence is a fusion construct, comprising the N-terminal region of mature human interleukin2 (IL2) and soluble CD39 (solCD39) coding region, having apyrase activity. This results in high levels of solCD39 expression and activity in the transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides recruitment, including platelet aggregation. Soluble CD39 polypeptides or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, cunstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, coronary and cerebral ischaemia, thrombosis intracardiac and venous peripheral and crebral artery thrombosis intracardiac and venous thrombosis, companism (PE) and transient ischaemic attack. Soluble CD39 is also useful CD2 preventing thrombosis formation, occlusion, reocclusion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   192

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                          The present cDNA sequence is a fusion construct encoding sol(soluble)CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombotic disorder including coronary artery thrombosis,
                                                                                                                                                                                                                                                                                                                                                                                                                       Soluble CD39; ADP-induced platelet activation; platelet aggregation; unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preeclampsia; embolism; platelet-associated ischaemic disorder; lung ischaemia; thrombolytic; cerebral ischaemia; thrombosis; cerebral artery thrombosis; intracardiac thrombosis; nerons thrombosis; peripheral artery thrombosis; cogquiopathy; deep venous thrombosis; peripheral artery thrombosis; restenness thrombosis; DVF; PB; pulmonary embolism; transient ischaemic attack; thrombus formation; cecclusion; secoclusion; secoclusion; secoclusion; secoclusion; cecclusion; secoclusion;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inhibiting platelet activation and recruitment, useful for treating a mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39

The present sequence is the cDNA encoding the human soluble CD39 protein, a cell surface molecule, having apyrase activity. It is derived from a human B cell line cDNA library, referred to as MP-1. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recuritment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precolampsis, embolism, platelet-associated ischemic disorders including lung, coronary and cerebral ischaemia, thrombotic disorders including coronary, coronary and cerebral artery thrombotic disorders including coronary, thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (UVI), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion,

The present cDNA sequence encodes soluble CD39 having apyrase activity.

This was derived from a cDNA library prepared from a human B cell line

creferred to as MP-1. Soluble CD39 retains the capacity of wildtype CD39

to metabolise ATP and ADP at physiologically relevant concentrations as

creding as the ability to block and reverse ADP-induced platelet activation

and recruitment including platelet aggregation. This is used in the

creatment of unstable angina, myocardial infarction, stroke, coronary

cartery disease or injury, atherosclerosis, peripheral vascular occlusion,

creatment, coronary ischaemia and carebral ischaemia, a thrombotic

clingischaemia, coronary artery thrombosis, cerebral ischaemia, a thrombotic

clisorder including coronary artery thrombosis, cerebral artery

thrombosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, coagulopathy, deep venous thrombosis, venous

thrombosis, thrombosis, coagulopathy, deep venous thrombosis (DVT),

culmonary embolism (PE), transient ischaemic attack. Soluble CD39 is also

cuseful for preventing thrombus formation or reformation, occlusion,

crecclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    113 GITCAACCCAGAACAAAGCATTGCCAGAAAACGTTAAGTATGGGATTGTGCTGGATGCGG 172

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of IL-17, IL-18, 4-1BB, CD30 or OX40 antagonists, for treating a cardiovascular disease, e.g. chronic immune myocarditis, congestive heart failure, aneurysm, angina, embolism, restenosis, ischemia or thrombocytopenic purpura.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method of treating cardiovascular disease in a subject, comprising administering an IL-17, IL-18, 4-1BB, CD30 or OX40 antagonist. The IL-17, IL-18, 4-1BB, CD30 or OX40 antagonists are useful for treating cardiovascular disorders, e.g. chronic immune) myocarditis, congestive heart failure, aneurysms, angina, embolism, restenosis, ischaemia or thrombocytopenic purpura. T present sequence is a coding sequence used in the exemplification of t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method for increasing or decreasing drug resistance in target bacteria, yeast, plant or mammalian cells by altering the ATP gradient across the biological membrane of the target cell. The method is useful for modulating drug resistance of cells. It iuseful for increasing the sensitivity of cells to chemotheraputic and antibiotic agents and increasing resistance to herbicides. The present sequence is human ATP diphosphohydrolase coding sequence. This sequence encodes was used in the present invention to modulate drug resistance. Note: The present sequence is not shown in the specification, but is referred to via its GenBank accession number

The invention relates to a conjugate (1) comprising an enzyme and a biodegradable polymer, where (i) enzymatic activity of the enzyme is biodegradable polymer, where (i) enzyme in the absence of the biodegradable polymer, or (ii) the half life of the enzyme is longer than that of the colymer, or (ii) the half life of the enzyme is longer than that of the colymer. The enzyme is longer than that of the colymer. The enzyme is a multimeric, soluble and/or extracellular mazyme, colymer. The enzyme especially a soluble form of CD39 and catalyzes hydrolysis of nucleoside diphosphate. The conjugate can be used to treat abnormal aggregation of platelets, particularly cardiovascular disease.

C diseases relating to abnormal levels of extracellular nucleotides or abnormal aggregation of platelets, particularly cardiovascular disease, cancer, sepsis or a disease related to graft transplant. (1) is also used infarction, unstable angina, atherosclerosis, pre-eclampsis, embolism, claretelet associated ischaemic disorders including lung, coronary and cerebral ischaemia, reocclusion following thrombosis, thrombotic cascers, and thrombosis and coagulopathies associated with exposure to a foreign or injured tissue surface, in combination with angioplasty, carctid endarterectomy, anastomosis of vascular grafts and chronic cardiovascular devices. The present sequence represents a DNA encoding a 1456 1397 TGAACCTGACCAACATGATCCCAGCTGAGCAACCATTGTCCACACCTCTCTCCCACTCCA New enzyme polymer conjugate used for treating abnormal levels of extracellular nucleotides or platelet aggregation, graft transplant, cardiovascular disease, cancer and sepsis. CD39; nucleoside diphosphate; thrombolytic; anticoagulant; cardiovascular; cytostatic; antibacterial; immunosuppressive; cardiant; antianginal; antiarteriosclerotic; gynaecological; cerebroprotective; cancer; human; apyrase; gene; ds.

The bovine aorta (AAW04335 to AAW04338 and AAW04340) and porcine pancreatic (AAW04339) ATPDases have been partially sequenced. The sequences have been found to be highly homologous to a human lymphoid cell activation antigen designated CD39 (Waliszenski et at. (1994). J. Immunol.: 3574-3583). The complete sequences of the ATPDases types I and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated ATP di:phospho:hydrolase enzymes - have anti-haemostatic
activity, useful for reducing platelet aggregation and thrombogenicity

II have not been obtained yet. Assuming that the CD39 gene product is an ATDBASE type II, the use of CD39 in the reduction of platelet aggregation and of thrombogenicity may be contemplated, as well as a process of making ATPDASSE using the CD39 sequence (AAT38516)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                  Non-human transgenic or somatic recombinant mammals, whose cells contain a heterologous DNA encoding a polypeptide (especially human CD39 protein) having ATP-diphosphohydrolase activity under cellular activating conditions is claimed. In particular the animal is a pig and its cells (or tissues or organs) can be used for transplantation. DNA coding for human CD39 is also useful for genetically modifying a mammalian cell to render it less susceptible to an inflammatory or immunological stimulus and platelet aggregation. The modified cells can be used to prevent or alleviate a thrombotic condition. The present sequence encodes human CD39 protein and was disclosed in J.Immunol. 153 (8) (1994) 3574-3584
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         772

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  834
```

A composition comprising a plurality of cDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.

SEQ ID NO 1475; 50pp; English.

The invention relates to a composition comprising a plurality of CDNAs for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the invention of an immunopathological conditions to form one or more hybridisation complexes, detecting the hybridisation complexes and comparing the levels of the detected in complexes with the level of hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes or more hybridisation complexes with the level of hybridisation complexes or more hybridisation complexes or more hybridisation complexes with the level of hybridisation complexes or more hybridisation complexes or more hybridisation complexes or more hybridisation complexes or correlates with the presence of the discovers of the discovers and a comparison of proposed are an expression profile comprising a microarray of polynucleotide probes. The General or method for identifying a plurality of polynucleotide probes. The converse or method for identifying a plurality of polynucleotide probes. The converse of the diagnosis of an immunopathology, such as Crohn's disease, asthma, culcerative colitis, hypereosinophila, irritable bowel syndrome, carcinogenic frumesticing architicis or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition carcinogenic fragments. This sequence represents a human cDNA of the invention. Note: The sequence fate for this patent dor form part of the printing proposition has because the printined appears the presence of the carcinogenic format directly when the presence of the carcinogenic format directly when the presence of the carcinogenic format directly when th from USPTO at segdata.uspto.gov/seguence.html

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a malecule which binds to the polypeptide angiogenic. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is angiogenic disorder in a mammal, particularly a human. The disorder is confined and the angiogenic disorder in a relational and a nucleic angiogenic disorder in a mammal, particularly a human. The disorder is confined and a second at the second and a relation and a partipleral vacular disease, hypertinaion, vascular inflammation, restenosis due to ancular disease, hypertension, chronic heart disease, ardiac congestion or macular degeneration due to age or osteoporosis. 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMYSOPRT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1431

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSDORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAGCCTCTACACAAGTCACTTTTGTACCCCAAAACCAGACTATCGAGTCCCCAGATAATG 770
